

McCracken County Schools Install Air Disinfection Devices

Indoor Air Quality Technology for Students and Staff

Paducah, KY – August 31, 2021, McCracken County Schools is installing WellAir’s air disinfection devices in every classroom. The devices use patented NanoStrike™ technology to help reduce harmful microorganisms in the air. The installation will be managed by MEDformance, a WellAir national distributor, and completed by September 17th.

With offerings that are used worldwide in healthcare, education, commercial and industrial settings, WellAir is a leader in delivering technologies that help provide a healthier indoor environment. Its NanoStrike technology, developed over 10 years ago, will become part of McCracken County Schools’ air and surface disinfection protocol.

“At McCracken County Schools nothing is more important than safer in-person learning environments for our students and dedicated staff. These technologies have been well-proven in some of the most renowned healthcare systems in the U.S.

Air disinfection allows us to proactively address the challenge of airborne transmission of infectious agents that may affect our student’s health, while also helping to improve the overall indoor air quality for all of our students and staff.”

Steve Carter, Superintendent, McCracken County Schools

MEDformance is a healthcare company with deep experience in medical diagnostics. They have worked closely with McCracken’s facilities management team to plan and execute the installation. As part of their proprietary MEDformance Safer Solutions™ layered IDC (Infectious Disease Control) approach, they are also collecting data to help target, measure and improve the effectiveness of McCracken’s ongoing infection control and air quality strategies.

Better indoor air quality has been shown to improve cognitive ability, reading comprehension, athletic performance, work performance, and test scores.

About WellAir

WellAir’s mission is to make the indoor world cleaner and safer. The company’s broad range of clean air and surface products are scientifically proven to help safeguard how people work, live and play.

WellAir, headquartered in Dublin, Ireland, with offices in Research Triangle Park, North Carolina, and Stamford, Connecticut, is a leading provider of infection control solutions.
